FMD-3200/BB/3300 ECDIS Program version 3.11 as the latest

Dear Valued Customers,

This is intended to inform you in order to avoid unnecessary workload and expenses for upgrading to the latest version. The program version 3.11 is considered as the latest version for majority of our customers in Greece. The newer version 3.13 was also posted on FURUNO head office website, but it was developed for some limited functionality only when it is connected with European Maker's Auto Pilot and also FURUNO MU-270W type monitor, which has not been marketed yet in Greece.

From practical point of view, there is no need to carry out upgrade if your FMD-3200/BB/3300 series ECDIS works with 3.11 version program on most of our customers in Greece.

Best regards,
Nobuhiro Ueda
Managing Director
FURUNO HELLAS S.A.
